DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-18 and 27-43**, drawn to a speech related application for classifying an audio signal based upon associated frequency data, classified in class 704, subclass 270.
 - II. **Claims 19-26 and 44-48**, drawn to speech/audio signal processing for representing an audio signal using calculated frequency data, classified in class 704, subclass 205.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the frequency representations of an audio signal utilized in Invention I for signal classification can be acquired using an alternative means (such as speech feature extraction) that does not require the specific

steps of Invention 2. The subcombination has separate utility such as obtaining speech frequency data for speech or word recognition.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. A telephone call was made to Benjamin Lee on 8/17/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
